

UNKNOWN CASE

Rocky Saenz DO
Botsford

Presentation

- A 24-year-old male with a chief complaint of left upper quadrant pain. He states that pain has been on and off for about 14 months. He does admit to being a gay homosexual.

History

- P exam
- signs and symptoms
- pertinent labs

IMAGES

IMAGES

IMAGES

Radiology FINDINGS

- Exam: CT AB with IV and oral contrast single axial image
- There is an area of hypoattenuation in the anterior portion of the spleen. This area does appear to be of fluid attenuation. The remainder of the image is normal.
